PROFILE

Hybrid professional with a strong background in **Public Accounting** and specialized experience as a **Full Stack Developer & Process Automator**. I focus on translating business logic (administrative/financial) into efficient software solutions, utilizing **Python, PHP, JavaScript, and MySQL**. My goal is to generate **tangible value** through key process automation and data analysis to optimize results

EDUCATION

Bachelor's Degree in Public Accounting

Degree obtained with a focus on financial analysis and computer science.

Universidad Alejandro de Humboldt. Caracas, Venezuela

Systems Engineering Program (In Progress) -

Estimated Completion Date: August 20, 2029

Bicentennial University of Aragua

HIGHER EDUCATION

Title: Diploma in Data Science and Artificial Intelligence

University of the Andes (ULA)

EXPERIENCE

Junior Programmer

(April 2024 - Present)

National Electoral Council (CNE), Caracas

- Developed software solutions for the optimization and automation of critical internal HR processes, focusing on personnel management.

TECHNIQUES SKILLS

IA & AUTOMATION:

n8n (workflow engine),

Ollama,

LangChain,

API de Gemini (LLM),

OCR.

LANGUAGES CORE:

Python,

PHP,

JavaScript (ES6+),

HTML5,

CSS3.

FRAMEWORKS & DB:

Flask,

Bootstrap,

JQuery,

MySQL,

MariaDB,

SQLAlchemy.

DATA & TOOLS:

Pandas,

Streamlit,

Git,

GitHub,

Insomnia.

- Implemented scripts in **Python (Pandas, Streamlit)** for data cleaning and structuring of personnel records.
- Designed and maintained the backend logic of personnel registration systems using **PHP and MySQL (MVC architecture)**.
- **Systematization and Data:** Led the creation of the personnel entry system and real-time database updates.
- **Quantifiable Achievement: Reduced manual registration time from 1.2 hours to just 6 minutes**, decreasing manual errors by **80%**, and maintaining clean data.

Technical Electoral Professional (Auditor) (2022 - 2024)

National Electoral Council (CNE), Caracas

- Performed rigorous auditing of accounting records and manual process analysis to identify bottlenecks and risk areas.
- Utilized my accounting knowledge to identify critical automation needs in administrative workflows, laying the groundwork for subsequent development projects.
- **Hybrid Achievement:** Actively participated in the development of the SICOPE system, applying my accounting and technical knowledge for the declaration of income and expenses of political actors.
- Contributed to ensuring data integrity and regulatory compliance in digitalized processes.

FEATURED PROJECTS

Intelligent Correspondence Flow Automation (HR-CNE) **(Includes n8n and llama3:8b)**

Developed a **workflow using n8n and Python (OCR)** that utilizes llama3:8b to automatically classify and distribute correspondence.

Achievement: 73% Operational Improvement, reducing management time from 15 minutes to just 4 per document.

Inventory Management and AI Queries for Auto Parts (Includes Flask and Gemini API)

Full Stack application (Flask and MySQL) integrating the **Gemini API** to automate technical customer queries.**Product Lifecycle:** Design, development, **Containerization with Docker**, and **Cloud Deployment (PaaS)** with a **CI/CD pipeline**. **Achievement: Increased customer service efficiency by 40%.**

Backtesting Bot for Trading Strategies (Includes Python and Pandas)

Python bot (Pandas, backtesting.py) connecting to **MT5** to validate the profitability of financial strategies. **Achievement:** Mitigated risks

DEPLOYMENT and DevOps

Docker,

Containerization, CI/CD

(Continuous

integration/Deployment),

Render(PaaS),

Environment Variables.

HABILIDADES BLANDAS

Proactivity and

Results-Orientation

Teamwork and Effective Communication

Solve Problems

LANGUAGES

SPANISH (Native)

ENGLISH (B1)

GERMANY (Basic)

and prevented significant financial losses for a client.

Complex Name and Surname Separator

Web desktop application created in **Streamlit** to automate the cleaning and preparation of complex name and surname data, vital for the CNE payroll department. **Achievement: Reduced manual cleaning time from approximately 3 hours for a 2000-record Excel sheet to only 12 seconds**

Clinical Management System

We developed a robust and comprehensive web application **PHP, MySQL, Bootstrap, JavaScript** that digitized and transformed the patient record. **Key Value:** We converted raw clinical data into performance metrics that facilitate managerial decision-making and the measurement of service efficiency. **Innovation: I integrated a Medical Agent based on LLM 3.8b** that uses clinical history to provide physicians with diagnostic and prognostic suggestions.

Personnel Management System

A centralized system **PHP, MySQL, Bootstrap, JavaScript** was created for the comprehensive management of staff and their families, prioritizing data integrity through rigorous validation by section to avoid manual errors. **Measurable Achievement: Registration time was reduced from 34 minutes to just 5 minutes**, and data accuracy was improved. Response times were also optimized with the creation of easily accessible interactive reports.
